

MeetUp

Feature Listing — Four Products, Four Audiences

Who	What They Use
MeetUp staff	Platform dashboard — run the whole product
Paying / signed-up customer	Client dashboard — their meetings and billing (company optional)
Host and people already in the call	Conference UI — the live meeting
Visitor with a link, not signed in	Guest UI — join without creating an account

01 Platform Dashboard

For MeetUp staff only · customers cannot open this

Business Overview

- Staff log in with a staff account
- See how the product is doing today: new signups, live meetings, people online, failed calls, storage used, payments

Customers & Companies

- Search any customer by name or email; open their plan, company, and number of meetings
- Turn a customer account off or back on; reset a customer's password
- Search companies (organizations); suspend a company if needed

Meetings & Recordings

- Search any meeting in the whole product; force-stop a meeting that is stuck
- Find any recording; delete it if it is abusive or illegal
- Staff do not watch customer video unless support rules allow it

Plans, Billing & Flags

- Create and edit paid plans (Free, Pro, Business, Enterprise) without asking a developer
- Set limits per plan: people count, meeting length, meetings per month, recording yes/no, storage size
- See who is on trial, who paid, who is overdue; change a customer's plan when support needs to help
- Turn big features on or off for everyone (guests, waiting room, recording)

Operations & Audit

- Check that video servers and calling are healthy
- Change company-wide settings: recording retention, email, file storage
- See a history of staff actions (who ended a meeting, who deleted a recording, who changed a plan)

02 Client Dashboard

For a logged-in customer · company is optional

Home & Meetings

- Home page with plan, usage, and shortcuts
- Start a meeting now, or schedule one for later (title, date, time, timezone, length)
- Join a meeting with an ID or link
- Meetings grouped as upcoming, live, finished, cancelled
- Copy the invite link; edit or delete a meeting they own
- After a meeting: how long it was, who joined, recording if any

Meeting Options & Recordings

- Meeting options: who can join, waiting room, guests allowed, camera / mic / chat / share rules
- Invite people to one meeting by email
- Recording library: play, download, delete when ready

Account & Billing

- Account settings: name, photo, timezone, language, password, email verification
- Default camera and microphone
- Notifications: invite received, meeting starting, recording ready, trial ending, payment failed

- See plan and limits; start a trial, upgrade, pay, or manage billing

Without a Company

- All meetings, recordings, and billing belong to the person personally
- No team members screen — they host as an individual

With a Company (optional, one per version)

- Switch between “My stuff” and “Company stuff”
- The person who creates the company is the Owner; invite teammates by email (they must accept)
- Roles: Owner, Admin, Member
- Company meetings, company recordings, and company rules (who can create meetings, guests allowed, waiting room always on, recording allowed, who can see recordings)
- Company rules beat a single meeting's options when they conflict
- Owner handles company billing; if someone leaves, the company keeps the meetings and recordings
- A person can leave the company

03 Conference UI

The live meeting screen · after someone is allowed in

Layout & Presence

- Everyone on screen in a balanced layout (rows, not one long line)
- When someone shares their screen, that screen is large and people sit in a strip
- Names, mute icon, raised hand, who is speaking

Pre-Join & Controls

- Before joining: test camera and mic, see the meeting name, copy the invite link
- Mute, camera on / off, share screen, change camera or mic
- Leave (only I leave; the meeting continues)

Interaction & Recording

- Chat, people list, emoji reactions, raise hand
- Host can record the whole meeting into one video file: people, sound, screen, and chat
- Everyone sees “Recording” while it is on; when it finishes, it appears in the customer's recordings list

Host Controls & Limits

- Waiting room: let people in, reject, or let all in
- Mute one person or everyone; remove someone
- Make someone a co-host or take it back
- End the meeting for everyone (not the same as Leave); lock the meeting so nobody new can join
- Clear messages if the meeting is full, time is almost up, or recording is not allowed on their plan

04 Guest UI

Join with a link, no account

Entry

- Open the link and see the meeting name, host, and time
- Clear states: not started yet, live now, already ended, full, or invalid link
- If guests are turned off, they are told to sign in or ask the host
- Enter a display name (email optional) — no password, no home page, no recordings list
- Test camera and mic

Joining & In-Call

- Join, or “ask to join” if there is a waiting room; wait until the host lets them in
- If rejected: “You cannot join this meeting”
- Inside the call they can talk, show video, chat, react, and raise a hand — if the host allowed those
- They cannot record, end the meeting, or let other people in — they can only Leave

After Call

- When they leave, their guest session is deleted
- Optional prompt after the call: “Create a free account to host your own meetings”
